

7.6 Partitions Homework

Page 512 #1-2

1. Find the point P along the directed line segment from point A to point B that divides the segment in the ratio 2 to 5.

① Vector from A to B $\langle 11, 3 \rangle$

② P is $\frac{2}{7}$ of the way between \overline{AB}

$$\frac{2}{7} \langle 11, 3 \rangle = \langle \frac{22}{7}, \frac{6}{7} \rangle$$

③ P is right $\frac{22}{7}$ units and up $\frac{6}{7}$ units from A .

$$A \left(-6, 2 \right) + \left\langle \frac{22}{7}, \frac{6}{7} \right\rangle$$

$$P \left(-\frac{20}{7}, \frac{20}{7} \right) \text{ or } P \left(-2\frac{6}{7}, 2\frac{6}{7} \right)$$

2. Find the point P along the directed line segment from point A to point B that divides the segment in the ratio 1 to 6.

① Vector from A to B is $\langle 10, -7 \rangle$

② P is $\frac{1}{7}$ of the way b/w \overline{AB}

$$\frac{1}{7} \langle 10, -7 \rangle \Rightarrow \langle \frac{10}{7}, -1 \rangle$$

③ P is $\frac{10}{7}$ units to the right and 1 unit down from A .

$$\text{so } A \left(-4, 5 \right) + \left\langle \frac{10}{7}, -1 \right\rangle$$

$$P \left(-\frac{18}{7}, 4 \right) \text{ or } P \left(-2\frac{4}{7}, 4 \right)$$
